

INDORAMA PETROCHEM

Product Description:

Indorama purified terephthalic acid is a fine white powder used as a key raw material component in the polyester value chain. Our PTA may also be utilized in the production of powder coatings, engineering resins and other non-polyester applications.

Manufacturer:

Indorama Petrochem Limited

4 Moo 2, Asia Industrial Estate, Tambol Banchang, Amphor Banchang, Rayong 21130 Thailand.

Tel: +66 3 689 081-5

Fax: +66 3 689 090

Packaging:

Indorama Petrochem supplies PTA in the following packaged forms:

Bags: PTA is supplied in PP woven bags of 1.1/1.2 MT each. These bags have been specially designed to sustain the long voyages through the movement of PTA by road, rail or ship. These bags facilitate ease of handling and have negligible chance of contamination or bursting.

For exports shipments 20 such bags are transported in a 20 ft container. Break-bulk cargos of large shipment are also accepted for major break-bulk ports.

Sea bulk: PTA can be supplied in 20 ft mild steel ISO lined container (TEU). This container is delivered completely lined on the inside with a one-trip polyethylene liner. In order to support the liner and to discharge, a bulkhead is fitted behind the doors of the TEU. We can load up to 27MT per sea bulk liner container

Hopper truck: Hopper trucks with aluminum bodies are used for local deliveries. These trucks can carry up to 28 mt.
